RESEARCH ASSOCIATE

We wrote a pair of Special Reports ([report one](#), [report two](#)) on the topic of small- and mid-sized company stocks in 2022 and thought a follow-up with additional number crunching was in order. The Cliffs Notes version of the preceding reports is that Small Cap and Mid Cap stocks are underrepresented in investor portfolios relative to companies of larger size. Significant upside potential and diversification benefits await those that are willing to sort the wheat from the chaff, as they are likely to find attractive opportunities in this specific corner of the market.

As a single reason to own Small Cap stocks, the long-term return series in Figure 1 is compelling, particularly when the stocks are of the Value variety that we have consistently preferred in the 46 years and counting that we've published *The Prudent Speculator* newsletter and managed assets. Not wanting to lead investors to Small Caps based on a single item (though it is a good one), this report offers additional reasons to like Small Cap stocks, including longer-term revenue and earnings growth trends, dividend growth and income diversification by geography.

We also note that the performance gap between Small Cap Value and Large Cap stocks has widened over the past six-plus years and there are potential diversification benefits that stem from venturing into stocks of smaller companies, versus the Large and Mega Cap names that tend to dominate many well-followed indexes.

### HISTORICAL EVIDENCE

We continue to find value in all market-cap strata, but smaller-cap stocks with reasonable price metrics and generous dividend yields have been largely left behind in recent years. That's an anomaly for many reasons, especially considering the terrific long-term performance for Small Value stocks below. Some of our more-recent newsletter picks being of the Small Cap variety and we launched a Small-Mid Dividend Value strategy in 2015 to focus on this area of the market.

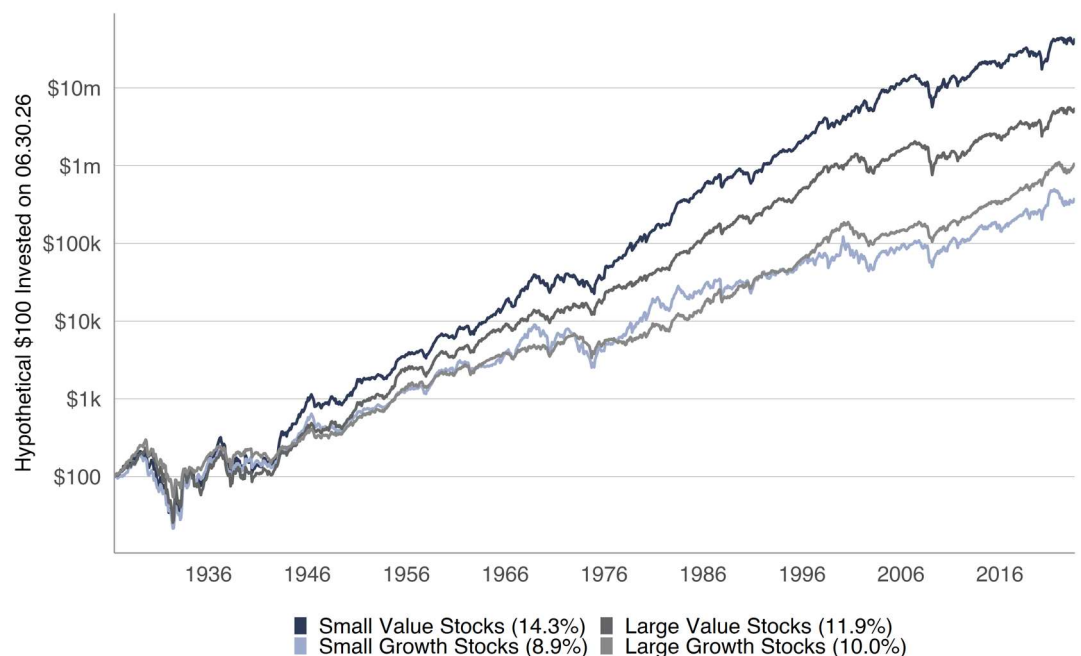

Figure 1: Ultra-Long-Term Performance since 1926

From 06.30.1926 through 07.31.2023. The portfolios are formed on Book Equity/Market Equity at the end of each June using NYSE breakpoints via Eugene F. Fama and Kenneth R. French. Logarithmic scale. SOURCE: Kovitz using data from Professors Eugene F. Fama and Kenneth R. French

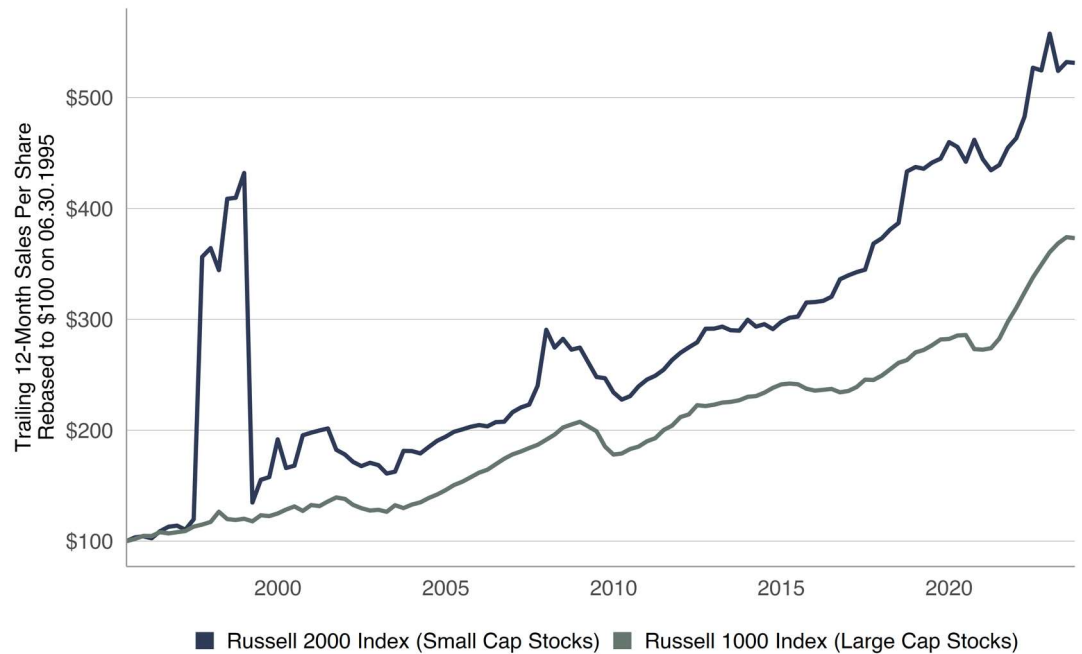

## REVENUE AND EARNINGS GROWTH

Large Cap stocks get a lot of fanfare. Apple's market capitalization is nearing \$3 trillion. The company had \$394 billion of revenue in 2022 and net income (profit) of \$99.8 billion. The profit figure is larger than the entire market value for all but 79 companies in the Russell 3000 index. Such figures turn heads and garner grand headlines, but there is an entire subset of investable stocks that get far less attention but are potentially more valuable in a diversified portfolio. Figures 2 and 3 show Small Cap stocks have grown their sales and earnings at a faster clip than Large Cap stocks, at least since Russell started publishing aggregate index-level data in 1995. Admittedly, Large Caps have tended to be more profitable, which is reflected in the narrower gap between the indexes on the earnings chart (Figure 5) compared with the sales chart (Figure 4). Still, investors looking for corporate growth at reasonable valuations should take a hard look at Small Cap stocks, though parsing through the opportunity set to separate the wheat from the chaff will take more effort than sorting through larger stocks.

## DIVIDEND GROWTH

Larger companies tend to be given credit for their business' maturity, allowing them to build up balance sheet cash and pay dividends to investors. Smaller companies are not necessarily knocked for their dividend payment programs or strong balance sheets, but investors often jump to conclusions about corporate stability by looking at a company's size. In Figures 4 and 5, we crunched numbers for nearly 2,500 dividend-paying companies between 2009 and 2022 and found that dividend hikes in Small Cap and Micro Cap stocks outpaced Large Cap and Giant Cap hikes by approximately a factor of two, indicating that smaller companies are a perfectly worthwhile place to search for yield growers. The theme carries over to the broad index level. The yield for the Small Caps is 2.9% (Russell 2000 index), 0.9% higher than that of the Large Caps (Russell 1000 index). We also note the broad indexes do not target dividend-payers specifically. As of September 30, 67% of Large Cap constituents and 39% of Small Cap constituents paid a dividend over the past year.

**Figure 4:**  
Dividend Growth  
by Market Capitalization

From 12.31.2009 through 12.31.2022. Includes only companies that paid a dividend in the Russell 3000. Total annual dividend payments were assigned by pay date. Companies that stopped trading mid-year were excluded for that year. Market capitalization buckets were determined by the value at the end of each year. ## DOMESTIC FOCUS

A strong U.S. dollar has been cutting into revenue and profitability figures for larger U.S.-based companies as the value of sales and earnings made in euros, pounds and other currencies are not worth as much after translations back into greenbacks. With persistent inflation also a headwind in many global markets and corporate profit margins for many multinational companies under pressure, the inclusion of exposure to U.S.-centric companies would seem to be of particular interest to investors.

## RECENT HISTORY - SMALL VS. LARGE RETURNS

Pivoting to the Value version of the Russell 2000 index, investors have seen the performance gap between Small Cap Russell 2000 Value index (with market caps between \$31 million and \$7.9 billion on September 30) and the Large Cap S&P 500 index widen over the past six-plus years. The tide started to turn in Q4 2020, but there is a long way to go just to even up the game, much less return Small Cap Value to its leadership position.

## DIFFERENTIATED EXPOSURE

Exposure overlap can be problematic for investors and often goes unnoticed. Diversification, often referred to as the only free lunch in investing, refers to the practice of spreading out investments across multiple assets, such that the bumps along the path to investment success are smoothed out. We have long found the diversification juice is worth the squeeze and we can see why an investor might consider themselves to be more diversified holding both a S&P 500 ETF and a Russell 1000 ETF, rather than picking one. After all, they are different vehicles covering different indexes. However, Figure 8 shows the sector-level exposures are effectively the same. An investor would find a much larger diversification benefit holding an S&P 500 ETF plus a Russell 2000 or Russell 2000 Value ETF because of the reduction in overlap. The additional diversification, in conjunction with fundamental and total return benefits, leads us to believe that Small Caps serve as an attractive slice of an investor's overall allocation.

## SMALL CAPS DESERVE A SPOT IN YOUR PORTFOLIO

We think there's a lot to like about Small Cap stocks, especially those that reside in the Value camp and pay dividends. While the preceding analysis uses broad indexes to cast the widest possible net, we do sleep better at night with the knowledge that the metrics on our managed account portfolios generally are far less expensive than those of the major market averages and are even priced more favorably than nearly all the Value indexes. The Small-Mid Dividend Value (SMID) strategy's forward P/E is 10.5x, compared to the 20.1x figure for its Russell 2000 Value benchmark and the 19.8x multiple for the S&P 500. What's more, SMID's estimated dividend yield is 3.1%, compared with the benchmark's 2.9% yield and the S&P 500's 1.6% figure.

Efforts to augment our comprehensive wealth management services frequently turn up valuable investment opportunities for our clients and future clients. The Small-Mid Dividend Value strategy is a product of such research, and it has been a live portfolio for nearly a decade, endeavoring to offer the benefits we've highlighted in this report when included as part of an investor's asset allocation.

For more than four decades, we have collaborated with our clients in their investment decision-making process as they pursue their long-term financial goals. We are committed to keeping your goals, concerns and attitude about investing at the heart of your plan. If you're ready to experience our personalized investment approach and exceptional client service, contact Jason R. Clark, CFA at 949.424.1013 or [jclark@kovitz.com](mailto:jclark@kovitz.com).

## DISCLOSURES

Opinions expressed are only our current opinions or our opinions on the posting date. Any graphs, data, or information in this publication are considered reliably sourced, but no representation is made that it is accurate or complete, and should not be relied upon as such. This information is subject to change without notice at any time, based on market and other conditions. The description of products, services, and performance results contained herein is not an offering or a solicitation of any kind, always consult with your tax advisor.

Definition of the Firm: Kovitz Investment Group Partners, LLC (Kovitz) is an investment adviser registered under the Investment Advisers Act of 1940 that provides investment management services to individual and institutional clients. From October 1, 2003 to December 31, 2015, the Firm was defined as Kovitz Investment Group, LLC. Effective January 1, 2016, Kovitz Investment Group, LLC underwent an organizational change and all persons responsible for portfolio management became employees of Kovitz. From January 1, 1997 to September 30, 2003, all persons responsible for portfolio management comprised the Kovitz Group, an independent division of Rothschild Investment Corp (Rothschild).

GIPS: Kovitz Investment Group Partners, LLC (Kovitz) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. Kovitz has been independently verified for the periods January 1, 1997 through December 31, 2018. The verification report is available upon request. Verification assesses whether (1) the firm has complied with all the composite construction requirements of the GIPS standards on a firm-wide basis and (2) the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards. Verification does not ensure the accuracy of any specific composite presentation. A complete list of firm composites and performance results is available upon request.

The description of products, services, and performance results contained herein is not an offering or a solicitation of any kind. Past performance is not an indication of future results. Securities investments are subject to risk and may lose value.

All returns are geometric average unless otherwise stated. The geometric average is calculated using the mean of a set of products that takes into account the effects of compounding.

The federal funds rate is the rate banks charge on loans to each other.

The quoted forward yield for the S&P 500 uses the iShares S&P 500 ETF (ticker: SPY) as a proxy. The quoted forward yield for the S&P Core Value uses iShares Core S&P U.S. Value ETF (ticker: IUSV) as a proxy. The quoted forward yield for the S&P Core Growth uses iShares Core S&P U.S. Growth ETF (ticker: IUSG) as a proxy.

The factor-based (book value-to-price) portfolio data is from Eugene F. Fama and Kenneth R. French. The dataset is broken into four groups: large value, large growth, small value and small growth. The aggregate Value and Growth portfolios are monthly averages of the two returns.

The Standard & Poors 500 index (S&P 500) is a broad stock market index based on the market capitalizations of the largest 500 companies listed in the U.S. Small company stocks, via Ibbotson Associates, are the bottom twenty percent of the New York Stock Exchange. Large company stocks, via Ibbotson Associates, are represented by the S&P 500 index. The S&P 500 Growth Index is a market capitalization weighted index. All the stocks in the underlying parent index are allocated into value or growth. Stocks that do not have pure value or pure growth characteristics have their market caps distributed between the value & growth indices. Prior to 12/19/2005 this index represented the S&P 500/Barra Growth Index. The S&P 500 Value Index is a market capitalization weighted index. All the stocks in the underlying parent index are allocated into value or growth. Stocks that do not have pure value or pure growth characteristics have their market caps distributed between the value & growth indices. Prior to 12/19/2005 this index represented the S&P 500/Barra Value Index.

Growth stocks = 50% Fama-French small growth and 50% Fama-French large growth returns rebalanced monthly. Value stocks = 50% Fama-French small value and 50% Fama-French large value returns rebalanced monthly. The portfolios are formed on Book Equity/Market Equity at the end of each June using NYSE breakpoints via Eugene F. Fama and Kenneth R. French. Dividend payers = 30% top of Fama-French dividend payers, 40% of middle Fama-French dividend payers, and 30% bottom of Fama-French dividend payers rebalanced monthly. Non-dividend payers = Fama-French stocks that do not pay a dividend. Long term corporate bonds represented by the Ibbotson Associates SBBI US LT Corp Total Return index. Long term government bonds represented by the Ibbotson Associates SBBI US LT Govt Total Return index. Intermediate term government bonds represented by the Ibbotson Associates SBBI US IT Govt Total Return index. Treasury bills represented by the Ibbotson Associates SBBI US 30 Day TBill Total Return index. Inflation represented by the Ibbotson Associates SBBI US Inflation index.

The Russell 3000 Index is composed of 3000 large U.S. companies, as determined by market capitalization. This portfolio of Securities represents approximately 98% of the investable U.S. equity market. The Russell 3000 Index is comprised of stocks within the Russell 1000 and the Russell 2000 Indices. Russell 3000 Growth Index measures the performance of those Russell 3000 Index companies with higher price-to-book ratios and higher forecasted growth values. Russell 3000 Value Index measures the performance of those Russell 3000 Index companies with lower price-to-book ratios and lower forecasted growth values.

The MSCI ACWI Index is a free-float weighted equity index. It was developed with a base value of 100 as of December 31 1987. It includes both emerging and developed world markets. The Bloomberg Barclays Global Aggregate Index is a flagship measure of global investment grade debt from twenty-four local currency markets. This multi-currency benchmark includes treasury, government-related, corporate and securitized fixed-rate bonds from both developed and emerging markets issuers. The DJ US Real Estate Index represents REITs & other companies that invest directly or indirectly in real estate through development, management or ownership, including property agencies. The index is a subset of the Dow Jones U.S. Index, which covers 95% of U.S. securities based on float-adjusted market capitalization. The S&P GSCI Total Return Index in USD is widely recognized as the leading measure of general commodity price movements and inflation in the world economy. Index is calculated primarily on a world production weighted basis, comprised of the principal physical commodities futures contracts.

From 1927 to present, we utilized the dividend-weighted portfolio data from Eugene F. Fama and Kenneth R. French. The dataset is broken into five groups: non-dividend paying, top 30% of dividend payers, middle 40% of dividend payers, bottom 30% of dividend payers and all dividend payers (weighted 30% of top dividend payers, 40% of middle dividend payers and 30% of low dividend payers).
